

IGI PT Viewer

Quick Start Guide

Let's get started. We recommend that you save this pdf and refer to it later, when using the IGI PT Viewer.

Read in Data: Simply drag data to the IGI PT launch icon , to open it in the viewer. Or, to start an empty job, double-click on the icon.

View the Job: The job opens with the areas shown below. To learn more see the [Intro Tour](#) video.

Layer List – Command Window

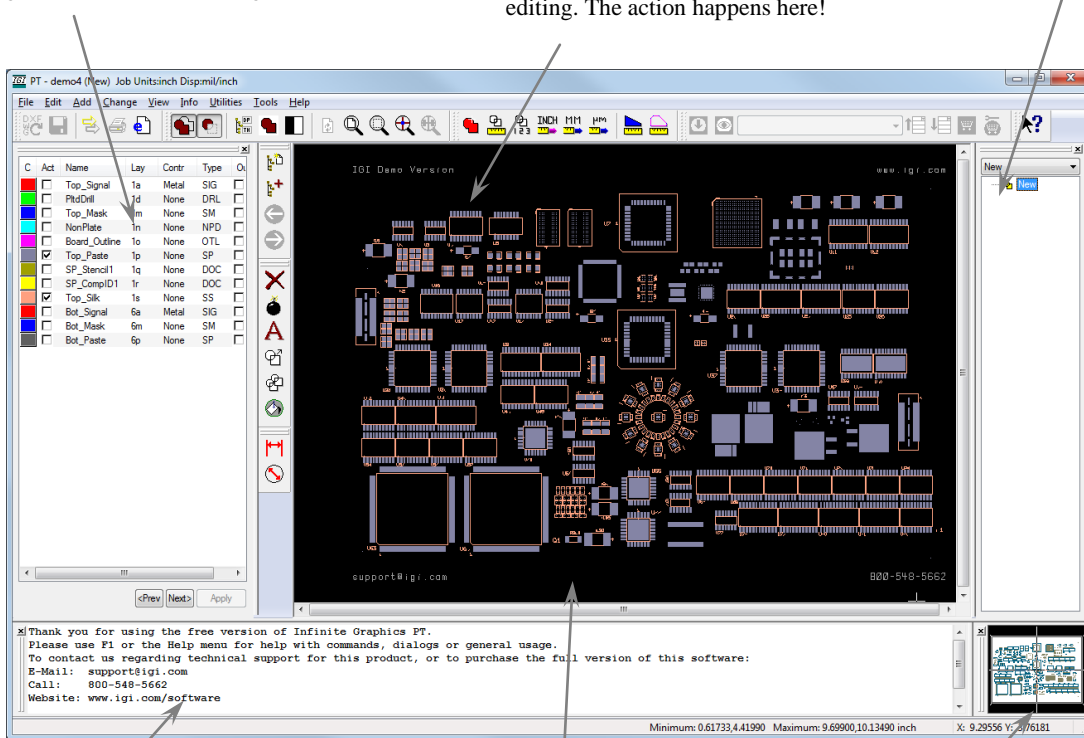

Use this area to turn layers on/off . Shows prompts, picking and location tools during commands.

Graphics Area

Zooming, scrolling/panning, viewing, editing. The action happens here!

Object Browser

Navigation for hierarchical data.

Text Area

Lists messages and reports. Many reports are interactive. Click to display them in the Graphics Area.

Zooming

Zoom in/out with Ctrl+Mouse Wheel, while hovering in the Graphics Area. Or create a zoom window with by clicking at opposite corners. Home key displays all.

Bird's Eye View

Overall view of the job with the current display highlighted.

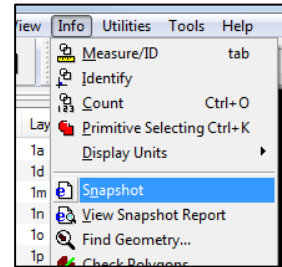

Find Information: Here are common ways to find information about data or software operations.

	Measure or Identify geometry in the job with a click.		Find Geometry – list any zero width geometry in the job or find geometry of a specified size.
	Count – reports the geometry you pick, by shape/size.		Zoom Display All – zooms to the extents of the displayed layers. Shortcut: Home key.
	Help for anything you click.	F1	Help for any dialog, field or an area where the cursor is hovering.

Communicate: Copy/Paste information to share, or create graphical reports with snapshots of areas of interest or cut/paste information to share.

Copy/Paste: In the Text Area, select text in a report and right click for options. Paste into email, Word or text editor.

Create Snapshot: Use the Info > Snapshot command to take a snapshot of the currently displayed graphics, adding your comments. Repeat the process and then send a single HTML report with graphics, locations, and comments.

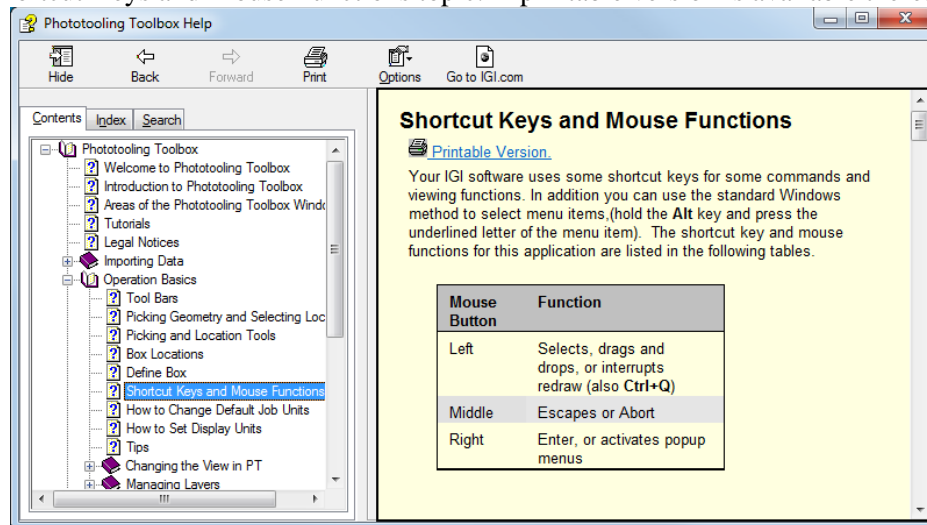

Free Intro Tutorials

Get started with [IGI Software Tutorials](#) on YouTube. You can learn basic operations for the areas of the window, as well as tips for running commands, selecting locations, picking geometry,

Shortcut Keys

Another useful item for quick start is the IGI_PT_Shortcuts.pdf. Start up the help by pressing F1, navigate to the Shortcut Keys and Mouse Functions topic. A printable version is available there.
